

ECO 101 -- Basic Economics.

What is economics and what is it good for? We will start with a review of the 10 modern principles of economics, both at the micro (individual behavior) and at the macro (nationwide trends) levels; study the evolution of worldly philosophy over the last 200 years; and understand the fundamental concepts of markets and prices. This intellectual foundation should allow us to better understand both typical consumer and typical producer behavior.
