

Seminar in Marine Science, Spring 2006

Instructor: Alan Shiller; 688-1178; Bldg 1020, Rm 131; alan.shiller@usm.edu

This course is designed to give students experience in the presentation of scientific results. Students choose their own presentation topic at the beginning of the semester and proceed through a series of short assignments emphasizing various aspects of scientific presentation.

1.	Jan 20	No Class
2.	Jan 27	Impromptu, Language, Humor, PowerPoint/Presentations
3.	Jan 28	Introduction of Topic, Chalkboard, Attire, Abstract writing
4.	Feb 3	Use of Graphics, Abstract Reviewing
5.	Feb 10	Abstracts, writing
6.	Feb 17	Answering questions
7.	Feb 24	No Class (Ocean Sci. Mtg. & MAS)
8.	Mar 3	PowerPoint Graphics, Speaker Introductions, Web Pages
9.	Mar 10	Web Pages, Posters, Conclusions
10.	Mar 17	Posters—draft
11.	Mar 24	Proposals, grant writing
12.	Mar 31	Posters
13.	Apr 7	National Meeting Presentations
14.	Apr 14	NO CLASS (SPRING BREAK)
15.	Apr 21	Scientific Ethics
16.	Apr 28	Scientific Ethics
17.	May 5	Presentations to the General Public
18.	May 12	NO CLASS/NO FINAL! (GRADUATION)

Note: This is a 1-unit course (i.e., we should meet 50 min/wk). Because it usually takes more than 50 min to go through each topic, we will meet for up to 2-hrs during each class session, but will have fewer than normal class sessions.

Seminar in Marine Science, Spring 2006

Instructor: Alan Shiller; 688-1178; Bldg 1020, Rm 131; alan.shiller@usm.edu

Course grading: Grade is based on a) content and effectiveness of presentations (80%) and b) class participation including attendance at all departmental seminars (20%). (Regarding seminar attendance: some exception can be made for conflicts arising due to participation in field or laboratory experiments or required obligations from other courses; for part-time students, some exception can be made for work-related obligations.) There is no final exam.

This course is designed to provide students with expertise in the presentation of scientific results while also facilitating student interaction on topics of current interest. Students need to pick a presentation topic at the beginning of the semester and may use that topic for all of their presentations. The topic must be a scientific topic suitable for study in our department. One's research is an acceptable topic; alternatively, you may focus on a specific topic (even one you've done a term paper on) or even just one paper from the literature. If you choose something you've worked on before, it is required that any presentation for this course (including abstracts) be significantly different than what you've done before. In other words, it is not acceptable to give a talk similar to a talk you've given in another class or turn in an abstract or poster similar to one you've done before. If your presentation involves a review of something from the literature, be sure to express things in your own terms, thereby avoiding the possibility of plagiarism.

Regarding "class participation," this course really only works well if students comment on and offer constructive criticism of the work of their fellow students. Thus, class participation not only means doing the required presentations but also actively participating in class discussions.

Web Page Information: We will make simple web pages during the semester. To do this you will need an account on a computer that is available for web hosting. One such computer is USM's "Ocean"; if you have a USM e-mail account (which all students should have), then you have an Ocean account. See Jamie Davis, David Sliman or call the USM Help Desk if you are unsure of you login and password.

If a student has a disability that qualifies under the Americans with Disabilities Act and requires accommodations, he/she should contact the Office of Support Services for information on appropriate policies and procedures: Southern Station Box 8586, Tel/TTY: 266-5024; Fax 266-6331.
