Addendum 2 for RFP 26-34

This responds to questions submitted by potential respondents. The University's answers are shown in red.

Amber Floyd

Buyer, Procurement, and Contract Services

1. Does the University require the mobile application to support real-time, bi-directional data synchronization with its existing student information systems, learning management systems, and other core enterprise platforms? If so, can the University specify the primary systems currently in use and any preferred integration methods or standards (e.g., APIs, middleware)?
 - **PeopleSoft is the Student Information System and Canvas is the Learning Management System used. Their API's are the ones that are being used for integrations**

2. Does the University require the mobile application to integrate with its existing campus safety and emergency notification systems to support features such as emergency alerts, panic functionality, and location-based notifications? If so, can the University specify the systems currently in use and any required integration capabilities?
 - **No, it is not a requirement at this time.**

3. Does the University intend for individual departments (e.g., Student Life, Admissions, Athletics) to manage their own content modules? If so, is a low-code/no-code administrative interface a requirement?
 - **Yes. Low-code/no-code are needed for content creators.**

4. What is the University's target "Go-Live" date? Does the University have a preference for a platform that can be fully integrated and operational for the Summer/Fall 2026 New Student Orientation (NSO) cycle?
 - **We are flexible on the "Go-Live" date, but will not do a release during the beginning of a semester.**

5. Can the University confirm if it is seeking a 5-year total project lifecycle (including renewals), and if so, should the pricing proposal reflect that duration?
 - **We are flexible on the "Go-Live" date, but will not do a release during the beginning of a semester.**
