

# THE UNIVERSITY OF SOUTHERN MISSISSIPPI

June 26, 2020

## ADDENDUM 2 TO BID 20-42

This addendum provides answers to questions submitted by prospective bidders. The University's answers are shown in **RED**.

Jessica Whitten  
Buyer

1. The specifications state the USV must have at least 500W payload. We would like to understand the payloads being considered that require this wattage. Also, is this maximum wattage needed continuously?
  - This was a typo and meant to read 50W, as none of the current plans will reach this requirement. Even 50W is high, but we want the capability for future expansion.
2. The specifications state the USV must operate at least one month at a speed of 3 kts. Is this continuous operation (24/7) or can it involve moments of station keeping or loiter?
  - Stopping to recharge, if needed, is not an issue. We understand with these requirements we will have to plan operations as needed for the USV. The size of the size of the USV needs to remain within specs.
