IMPORTANT INFORMATION
Regarding your 2G machine-to-machine service
REMINDER LETTER

April 13, 2015

This notice may impact others within your organization. Please forward this letter to those individuals in your company who may have mobile communications responsibilities for machine-to-machine services.

As part of AT&T's strategy to address growing customer demand for mobile services, AT&T expects to fully discontinue service on our 2G networks by approximately January 1, 2017. This transition will enable AT&T to enhance its network for its customers by freeing up valuable spectrum and providing increased speed and capacity using more efficient 3G and LTE technologies. This is one of a series of notifications which AT&T is providing to customers like you.

Additionally, please be advised that AT&T may turn down one band of 2G service, such as 1900 MHz or 850 MHz service, in some markets and AT&T may fully turn down the 2G network (both 1900 MHz and 850 MHz service) in some markets ahead of the January 1, 2017 nationwide turndown. In cases where we are turning down AT&T's owned and operated 2G network earlier, we are committed to notifying our impacted customers in advance. This will enable us to meet the needs of the entire market while also helping to ensure that affected customers have an opportunity to transition their service.

AT&T strongly encourages all of its customers to adopt 3G or LTE service and migrate all 2G devices as soon as possible. Your AT&T account team will be a valuable resource as you plan your 3G adoption and migration, and you should feel free to contact them with any questions or concerns. In addition, AT&T has established a website that provides valuable information on migration planning, specifically for our machine-to-machine customers. The website will be updated as new information becomes available. It also provides resources such as a current list of certified 3G equipment manufacturers and information about our Mobile Broadband Accelerator (MBA) Program that could provide reduced equipment pricing.

Please visit the website regularly for updated information at http://cd2migration.att.com.

AT&T values you as a customer and understands the importance that wireless data communications means to your operations. We thank you for your continued loyalty to AT&T and look forward to continuing to serve you in the future.
